## DELTA LEARNERS USE CLIPBOARDS MADE FROM RECYCLED MATERIALS

Delta Environmental Centre was thrilled to receive a donation of 150 timberplastic clipboards from Tetra Pak South Africa (Pty) Ltd. Delta has many school groups of all ages visiting its centre for environmental education programmes, and many of the activities involve the learner completing activity worksheets.

These clipboards are ideal for the learner to do just this especially as they are always on the "move" - desks would be totally unsuitable for this purpose! The learners get very excited when they can use the boards and are fascinated when we tell them that these boards are made from recycled products. These clipboards serve not only a practical purpose but also an educational one.

Grade 3 learners from the Benoni Muslim School using the timberplastic clipboards

The NRF has a permanent educational exhibit on recycling, as well as a multi-material recycling drop-off point at Delta, both of which are used as resources for the education programmes offered.
